Patricia Wall worked at PrimusLabs beginning in the Fall of 2012 before moving to a consulting role in June 2014. During her time with us, she served as a Chemist in our Pesticide Residue lab before transitioning to the role of Quality Assurance Specialist for our Residue and Microbiological laboratories. In this position, Patricia exhibited numerous abilities that are worthy of note. She has a strong understanding of ISO regulations and regulatory and standards compliance. She has the ability to gain understanding of all parts of business and technical regulation to facilitate structural design. She is extremely detail oriented and focused, has great training abilities, and has project management skills, and the ability to lead project teams and coordinate multiple technical aspects of projects. She also has the ability to grasp technical nuances associated with project management and the ability to put the structure in place to execute projects. She could be a good resource for companies desiring project management leadership.

If your company is looking for a consultant to develop or improve your quality system or serve in a project management role, Patricia should be considered for the task. She has proven herself to be capable in coordinating large projects that utilize diverse groups of individuals.
