

Pre-Harvest Block Inspection Explanation

The pre-harvest block inspection questionnaire is designed to be a short last minute check that “clears” the specific block for harvesting. Ideally the inspection should be executed as close to harvest as possible, no greater than 7 days prior to harvest date. The key areas covered by the inspection are crop contamination issues from various sources.

The program allows for the addition of photo’s, voice recordings, GPS coordinates, as well as texts comments. The desired response is “No” to all questions. **If a “Yes” response is recorded, this should trigger the user to enact immediate correctives actions, i.e. a delay in harvesting until a full investigation into the observed issue has occurred.**

The inspection can be recorded on the paper based form (see <http://www.primuslabs.com/rs/documents.aspx>) and then downloaded to the database at a later time. When stored on the database, an e-mail of the inspection is sent to your e-mail address, as well as being stored on the PrimusLabs.com database. This provides an audit trail and historical record of the work done. The database program also allows one to record any corrective actions that are undertaken.

You can access the on line inspection entry program here <https://intranet.primuslabs.com/audit/default.asp> . If you are already a registered user, please use your existing log in details. If you are a new user please click “Register” in the top left of the screen and create your own free login account.

If you require a PDA version of the Pre-Harvest Block Inspection or a version tailored to your operations specific needs, please do not hesitate to contact us.

If you have any questions, please do not hesitate to contact PrimusLabs.com via e-mail at auditdb@primuslabs.com or at 1 800 779 1156.
